Cellular and Molecular Neurobiology—Volume 3, 1983

ellular and Molecular Neurobiology publishes original research articles concerned with the analysis of neuronal and brain function at the cellular subcellular levels. The journal welcomes articles utilizing anatomic, physiologic, pharmacologic, or biochemical approaches to the study of euronal function and oriented to the analysis of elementary mechanisms. Studies of isolated mammalian tissues, and intact animals, with vestigation aimed at the molecular mechanisms or neuronal responses at the level of single cells, are accepted for publication. The journal also esents studies of the effects of neurons on other organ systems, such as analysis of the electrical or biochemical response to neurotransmitters or urohormones on smooth muscle or gland cells.
